1.0 Introduction

1.1 Background

1.1.1 This report has been prepared by JPP Consulting Limited on behalf of Manor Oak Homes to support an outline planning application for residential development comprising 166 dwellings with associated highway infrastructure and public open space. The benefit of this report is limited to our instructing Client.

1.1.2 The proposed residential development is located at land off Cork Lane, Glen Parva. Glen Parva is located to the south of Leicester and north of Blaby as shown on the location plan in Figure 1 and enclosed in Appendix A. The proposed development is bound by residential development to the north and south, agricultural land to the west and Cork Lane to the east.

Figure 1: Site Location Plan

1.2 Scope of Assessment

1.2.1 The aim of the Transport Assessment is to support an outline planning application for a residential development comprising up to 166 dwellings. The proposed development layout is shown on the drawing enclosed in Appendix B.

1.2.2 This report will consider the wider highway network implications of the new development and will also focus on the sustainable credentials of the development.

1.2.3 This report is accompanied by a Framework Residential Travel Plan, JPP reference R-RTP-R6711PP-01. The Travel Plans and Transport Assessment should be read as sister documents.

1.3 Consultation

- 1.3.1 A scoping note was produced in October 2013 and sent to Leicestershire County Council and Leicester City Council, who are the local highway authorities for the roads affected by this development. A copy of the scoping note is enclosed in Appendix F. Comments received from both authorities to the scoping note are also enclosed in Appendix F.
- 1.3.2 The Transport Assessment has been written generally in line with the submitted Scoping Note and comments received from both highways authorities.

1.4 Structure of Report

- 1.4.1 Following this introductory chapter the report is structured as follows:
- Section 2 describes the site and development proposal;
 - Section 3 reviews relevant national and local transport policies;
 - Section 4 describes the characteristics of the existing transport network surrounding the development site;
 - Section 5 assesses the accessibility of the site to education, health, employment, retail and leisure facilities;
 - Section 6 sets out the person trips and mode assignment from the proposed development;
 - Section 7 assesses the impact of the proposed development on more sustainable forms of transport;
 - Section 8 assesses the impact of the proposed development on vehicular highway network; and
 - Section 9 is the conclusions.

2.0 Site Description and Development Proposals

2.1 Site Location

2.1.1 The proposed residential development is located to the south of Leicester and north of Blaby at land off Cork Lane, Leicester as shown on the location plan below in Figure 1 and enclosed in Appendix A. The proposed development is bound by residential developments to the north and south, Cork Lane to the east and agricultural land to the west.

2.2 Development Description

2.2.1 The proposed development will comprise up to 166 residential dwellings with associated highway infrastructure and public open space. The proposed development layout is shown on the plan enclosed in Appendix B.

2.2.2 The main estate roads within the development will comprise 5.5m wide carriageway with 2 x 2m wide verges and 2 x 2m wide footway

2.3 Vehicular Access

2.3.1 The proposed residential development will be accessed via an extension of cork lane into the development site. The proposed access is shown in Appendix B.

2.4 Pedestrian and Cycle Access

2.4.1 In addition to the vehicular access the proposed residential development will provide a pedestrian link to the public footpath which runs parallel to the site's northern boundary.

2.5 Parking

2.5.1 Car and cycle parking for the development will be provided in line with guidance set out in the 6Cs Design Guide.

2.6 Planning Background

2.6.1 The proposed development site is currently agricultural land. It has previously been used as a quarry and landfill.

3.0 Policy Review

3.1 Introduction

3.1.1 The following section of the report provides an examination of current policies relating to transport at national and local level as they relate to the proposed development.

3.2 National Policy

3.2.1 Creating Growth, Cutting Carbon: Making Sustainable Local Transport Happen, The Transport White Paper was published in January 2011 by the Coalition Government. The Document outlines a vision ‘for a transport system that is an engine for economic growth, but one that is also greener and safer and improves quality of life in our communities.’ Consequently, reducing carbon emissions derived from transport together with generating economic growth and contributing to economic vitality. The Localism Agenda is another strong theme with the White Paper supporting local solutions that are tailored to specific needs and behaviour patterns to deliver effective local transport.

3.2.2 The priority for local transport, as outlined is to “encourage sustainable local travel and economic growth by making public transport and cycling and walking more attractive and effective, promoting lower carbon transport and tackling local road congestion.

3.2.3 The White Paper Chapter 4 is titled Enabling Sustainable Transport Choices. The chapter states that ‘the Government wants to encourage and enable more sustainable transport choices’. The document goes on to explain the “nudge” concept that taps into human behavioural tendencies to encourage “good” choices. Nudge interventions are described as being easy and not forbidding choice and travel planning is listed as an example of such.

3.3 National Planning Policy Framework

- 3.3.1 In March 2012, the National Policy Framework (NPPF) was published by the coalition government with its overarching principle being a *'presumption in favour of sustainable development.'* The policies contained within the NPPF applied with immediate effect and thereby replaced, amongst other PPS's and PPG's, PPG 13 'Transport'. Section 4 of the NPPF 'Promoting sustainable transport' covers the transport policy, detailed below are the policies that are of relevance.
- 3.3.2 In paragraph 29, the NPPF acknowledges that *'transport policies have an important role to play in facilitating sustainable development but also in contributing to wider sustainability and health objectives'* and goes on to say *'the transport system needs to be balanced in favour of sustainable transport modes, giving people a real choice about how they travel'*.
- 3.3.3 Paragraph 36 states that *'All developments which generates significant amounts of movement should be required to provide a Travel Plan'*.
- 3.3.4 Paragraph 38 states *'Where practical, particularly within large scale developments, key facilities such as primary schools and local shops should be located within walking distance of most properties'*.

4.0 Existing Conditions

4.1 Road Network

4.1.1 The existing local highway infrastructure is shown on the plan enclosed in Appendix C.

4.1.2 The proposed development will be accessed off Cork Lane. Cody Road has a width of 5.5m and is bound by 1.8m wide footways on both sides of the carriageway. Cork Lane provides connections to Glenville Avenue and West View Avenue which both in turn connect at their eastern end with A426 Leicester Road a primary route which provides the development connections to the centres of Leicester and Blaby. All roads are subject to a 30mph speed limit and are street lit.

4.2 Pedestrian Facilities

4.2.1 The surrounding roads are typically bound by footways on both sides of the carriageway and generally provide dropped kerbs with occasional tactile paving at the appropriate locations.

1.5.2.2 A metaled bridleway connects Cork Lane with New Bridge Road and Winchester Avenue to the south.

1.5.2.2 Walking distances and the proximity of key facilities is shown on the plan enclosed in Appendix C.

4.3 Cycle Facilities

4.3.1 There are a number of dedicated cycling facilities within the vicinity including national cycle route number 6 on Cork Lane. The existing cycling facilities within the vicinity of the site are shown in Appendix E.

1.5.3.2 Cycling distances and the proximity of key facilities is shown on the plan enclosed in Appendix C.

4.4 Public Transport

4.4.1 Bus

4.4.1.1 The nearest existing bus stops for the proposed development are located Leicester Road approximately 550m from the proposed site entrance. The location of the existing bus stops is shown on the facilities plan enclosed in Appendix C.

4.4.1.2 General bus service frequencies and routes of buses utilising the bus stops are set out in table 3.1 below. Full time table and bus route information is enclosed in Appendix D. The information provided in the tables below and the appendices was correct at the time of publication.

Summary of bus services			
Service	Route	Service Times	Day Time Frequency
84	Leicester - Blaby - Whetstone - Cosby - Broughton Astley - Lutterworth	First ≈ 0630 Last ≈ 2120	Every 10 mins
84A	Leicester - Blaby - Whetstone		
85	Leicester - Blaby - Countesthorpe - South Wigston		

Table 3.1

4.4.1.3 The combined 84/84A/85 bus routes will provide residents with a regular bus service to Leicester City Centre and Blaby and therefore offers commuters a sustainable alternative to the private car. Leicestershire County Council and Leicestershire City Council have recently completed bus lane works to the A426 between the Blaby and Leicester. These works will improve journey times for buses therefore increasing the likelihood that buses will be utilised as an alternative to the private car.

4.4.2 Rail

4.4.2.1 The nearest railway station is located approximately 3.1km (1.9miles) from the proposed development at South Wigston. The railway station is located on the Birmingham to Peterborough line and is served by occasional trains travelling between Birmingham and Leicester. The nearest full service train station is Leicester Station located approximately 6.5km (4.0 miles)

4.4.2.2 The railway stations will offer opportunities for commuters making long distance journeys to travel my more sustainable forms of transport.

4.5 Recorded Accident Data

- 4.5.1 Recorded accident data was obtained from Leicestershire County Council for the five year period from 1st September 2009 to 31st December 2013. A plan of the collision data obtained from Leicestershire County Council is enclosed in Appendix G.
- 4.5.2 There are a number of accidents within the area considered comprising 38 slight injury accidents and 3 serious accidents.
- 4.5.3 Of the recorded accidents near the proposed development there is no significant theme which would suggest there are any geometric deficiencies.
- 4.5.4 From the reported accident data there does not appear to be a significant accident problem on the surrounding highway infrastructure. We therefore do not consider that the proposed development will result in conditions detrimental to highway safety.

4.6 Summary

- 4.6.1 The proposed residential development is located to the south of Leicester and north of Blaby at land off Cork Lane, Leicester. The proposed residential development will be accessed via an extension of Cork Lane into the development site. In addition to the vehicular access the proposed residential development will provide a pedestrian link to the public footpath which runs parallel to the site's northern boundary.
- 4.6.2 The proposed development has good links to the existing walking and cycling infrastructure.
- 4.6.3 The nearest bus stops to the development are served by three regular bus services which combine to offer a 10 minute service to Blaby and Leicester. These buses will offer residents of the development the opportunity to travel to Leicester City Centre and Blaby via more sustainable forms of transport for work and leisure trips. Recent works to provide a dedicated bus lane on the A426 will result in improved journey times for passengers.
- 4.6.4 The nearest railway station is located approximately 3.1km (1.9miles) from the proposed development at South Wigston. The railway station is located on the Birmingham to Peterborough line and is served by occasional trains travelling between Birmingham and Leicester. The nearest full service train station is Leicester Station located approximately 6.5km (4.0 miles)
- 4.6.5 From the report accident data there does not appear to be a significant accident problem on the surrounding highway infrastructure. We therefore do not consider that the proposed development will result in conditions detrimental to highway safety.

5.0 Accessibility

5.1 Introduction

5.1.1 The review of the planning policy presented in section 3 of this report highlights the need for need for sustainable developments to have good accessibility to education, health facilities, employment, leisure and retail. Paragraph 38 of the National Planning Policy Framework states ‘Where practical, particularly within large scale developments, key facilities such as primary schools and local shops should be located within walking distance of most properties’.

5.1.2 This section therefore considers the accessibility from the development, by modes of sustainable transport to local facilities including education, health services, employment, leisure and retail. A plan showing the location of key local facilities local to the development site is enclosed in Appendix C.

5.1.3 Walking

5.1.3.1 With reference to the Chartered Institution of Highways and Transportation (CIHT) publication ‘Guidelines for Providing for Journeys on Foot’ (2000), it is suggested that around 80% of walk journeys and walk stages are less than 1 mile (1610m). This guidance also provides ‘suggested acceptable walking distances’ which are set out in table 5.1 below.

5.1.3.2 Indicative walking time calculations have been calculated assuming a ‘typical’ walking speed of approximately 1.4m/s or 3mph. These are shown against the suggested walking distances set out in table 5.1 below.

Walking Distance and Journey Times						
	Town Centre		Commuting / School / Sight Seeing		Elsewhere	
	Distance (m)	Time (mins)	Distance (m)	Time (mins)	Distance (m)	Time (mins)
Desirable	200	2.4	500	6	400	4.8
Acceptable	400	4.8	1000	11.9	800	9.5
Preferred Maximum	800	9.5	2000	23.8	1200	14.3

Table 5.1

5.1.3.3 A plan showing local facilities and walking distances is enclosed in Appendix C.

5.1.4 Cycling

- 5.1.4.1 Section 3.10 of the Local Transport note 01/04 states that generally a 4km cycle distance is considered acceptable.
- 5.1.4.2 Assuming a cycling speed of 12kmph the maximum accepted time for a cycling journey is 20mins.
- 5.1.4.3 A plan showing the location of key local facilities local to the development site is enclosed in Appendix E. It can be seen that all facilities within Blaby are located within a 1.6km radial distance from the proposed development's access.

5.2 Accessibility to Education

- 5.2.1 The proposed development is located within approximately 400m walking distance of the nearest existing primary school, Glen Hills, which is located on Featherby Drive. This is within the desirable walking distance for school journeys as set out in table 5.1 above.
- 5.2.2 The nearest secondary school, South Wigston High School, is located approximately 2600m from the proposed development. This school is within an acceptable cycling distance a significant proportion of which can be completed on off road cycle routes.
- 5.2.3 The proposed development is shown to be located within acceptable walking and cycling distances of schools.

5.3 Accessibility to Health

- 5.3.1 The nearest doctors' is located approximately 1700m from the proposed development in Blaby, see Appendix C. The doctors' surgery is located within the preferred maximum walking distance.
- 5.3.2 The nearest dentist and pharmacy are located approximately 800m from the development on Grange Drive. The dentist and pharmacy are located within the desirable walking distances, see Appendix C.
- 5.3.3 The proposed development is shown to be located within acceptable walking and cycling distances of health services.

5.4 Accessibility to Retail and Leisure

- 5.4.1 The proposed development site is located within walking distance of Blaby town centre. The proposed development is also within close proximity of a regular bus service which provides connections to shopping and leisure opportunities in Blaby town centre and Leicester City Centre.

- 5.4.2 The proposed development is shown to be located within acceptable walking, cycling and public transport distances of retail and leisure services.

5.5 Accessibility to Employment

- 5.5.1 The development site is located within walking distance of Blaby town centre. The proposed development is also within close proximity of a regular bus service which provides connections to employment opportunities in Blaby town centre and Leicester City Centre.

- 5.5.2 The proposed development is shown to be located within suitable walking, cycling and public transport distances of employment opportunities.

6.0 Trip Generation and Distribution

6.1 The proposed development will comprise 166 residential dwellings. Person trip generation rates have been obtained from the TRICS database version 2013(6)v6.12.2. The TRICS data is enclosed in Appendix H. Person trip rates are shown in table 6.1 below.

Proposed Person Trip Generation Rate – 85 th %ile						
Use	AM Peak (0800-0900)			PM Peak (1700-1800)		
	Arrivals	Departures	Total	Arrivals	Departures	Total
Residential per dwelling	0.438	1.1	1.538	0.812	0.399	1.211

Table 6.1

6.2 From the above vehicle trip rates the number of person trips for the proposed development can be calculated based on a development size of 166 dwellings. The predicted person trip numbers from the proposed development are set out in table 6.2 below.

Proposed Person Trips						
Use	AM Peak (0800-0900)			PM Peak (1700-1800)		
	Arrivals	Departures	Total	Arrivals	Departures	Total
Residential	73	183	255	135	66	201

Table 6.2

6.3 To predict the number of trips generated by mode of transport, travel to work data has been obtained from the 2011 Census for the Saxondale ward which the proposed development is located within. The journey to work data is shown in table 6.3 below.

Method of Travel to Work Resident Population – Saxondale Ward 2011 Census	
Mode	Percentage
Driving a Car or Van	73.6%
On Foot	8.3%
Bus, Minibus or Coach	6.5%
Passenger in a Car or Van	5.7%
Bicycle	4.0%
Train	0.8%
Motorcycle, Scooter or Moped	0.7%
Taxi	0.3%

Table 6.3

6.4 Using the above modal split information it is possible to predict the number of trips made using all forms of transport. Whilst the data does not reflect the fact that not all peak period trips are made to work it offers a good reflection of the actual circumstances. The predicted number of trips by mode from the proposed development is set out in table 6.4 below.

Proposed Trip Numbers by Mode						
Mode	AM Peak (0800-0900)			PM Peak (1700-1800)		
	Arrivals	Departures	Total	Arrivals	Departures	Total
Car Driver	54	134	188	99	49	148
On Foot	6	15	21	11	5	17
Bus	5	12	17	9	4	13
Car Passenger	4	10	15	8	4	12
Bicycle	3	7	10	5	3	8
Train	1	1	2	1	1	2
Motorcycle	1	1	2	1	0	1
Taxi	0	1	1	0	0	1

Table 6.4

6.5 Vehicle trips generated by the proposed development have been distributed on to the surrounding highway infrastructure using 2001 origin and destination census data. This census data and assignment is enclosed in Appendix I. The proposed assignment of these vehicles is shown on the highway network vehicle trip diagrams enclosed in Appendix J.

7.0 Sustainable Modes of Transport Impact

7.1 Introduction

7.1.1 This section of the Transport Assessment will assess the impact of the proposed development on the local sustainable transport infrastructure.

7.1.2 The trip generation for the sustainable modes of transport has been calculated in section 6. The sustainable trips predicted from the proposed development are summarised in table 7.1 below.

Proposed More Sustainable Trip Numbers						
Mode	AM Peak (0800-0900)			PM Peak (1700-1800)		
	Arrivals	Departures	Total	Arrivals	Departures	Total
On Foot	6	15	21	11	5	17
Train	5	12	17	9	4	13
Car Passenger	4	10	15	8	4	12
Bus	3	7	10	5	3	8
Bicycle	1	1	2	1	1	2
Motorcycle	1	1	2	1	0	1

Table 7.1

7.2 Walking

7.2.1 The proposed development is predicted to generate 17 and 13 additional pedestrian trips during the morning and evening peak hours respectively. The proposed development will connect to the existing pedestrian network via footways and bridleways on Cork Lane.

7.2.2 The new pedestrian trips equates to one journey in any direction every 3.5 to 4.6 minutes. This small number of pedestrians can be accommodated on the existing and proposed pedestrian infrastructure.

7.3 Cycling

7.3.1 The proposed development is predicted to generate approximately 2 cyclist trips in the both the morning and evening peak periods. The number of predicted cyclist trips is small and could be accommodated on the existing highway infrastructure.

7.3.2 The proposed development will incorporate cycle parking provision for each dwelling.

7.4 Public Transport

- 7.4.1 The proposed development is predicted to generate approximately 10 and 8 additional bus journeys in the morning and evening peak periods respectively. The number of predicted bus journeys is small and could be accommodated within existing services.

8.0 Vehicular Impact

8.1 Introduction

8.1 This section will assess the impact of the proposed development on the existing vehicular infrastructure.

8.2 Area of Assessment

8.2.1 The area of assessment has been agreed with Leicestershire County Council and Leicester City Council in pre-application discussions with the following junctions highlighted for further assessment:

1. Glenville Road / Leicester Road;
2. Leicester Road / Little Glen Road;
3. Leicester Road / Soar Valley Way / Glenhills Way; and
4. Leicester Road / Middleton Street.d

8.3 Background Traffic

8.3.1 Vehicle counts at the above junctions were completed on Tuesday 3rd December. The traffic count data is enclosed in Appendix K.

8.4 Committed Development Traffic

8.4.1 As discussed with Leicestershire County Council and Leicester City Council we are not aware of any significant developments within close proximity which would affect the assessment. Therefore no committed developments have been included in the assessment.

8.5 Assessment Periods

8.5.1 The impact of the development will be considered on the surrounding highway infrastructure during the morning and evening peak periods of 0800-0900 and 1700-1800.

8.5.2 In line Department of Transport document 'Guidance for Transport Assessment' future year assessments have been completed for 2018 or five years after the planning application was submitted.

8.5.3 To adjust these traffic counts to the assessment years of 2018 traffic growth factors have been utilised from NTEM dataset 6.2 and NTM dataset AF09. Growth factors have been obtained for Blaby and Leicester (main). The growth factors are set out in table 8.5 below.

Tempo Growth Factors		
	AM Peak	PM Peak
2013-2018 – Blaby	1.0369	1.0385
2013-2018 – Leicester (main)	1.0702	1.0693

Table 8.5

8.5.4 It can be seen that the growth factors for Leicester (main) are larger than for Blaby. To ensure a conservative and robust approach is taken growth factors for Leicester (main) will be applied across background traffic at all junctions.

8.6 Junction Assessments

8.6.1 The junctions listed in section 8.1 have been assessed where appropriate utilising TRL software Junctions 8 and Transyt 14. The results of the junction assessments are set out below.

8.6.2 J1: Glenville Road / Leicester Road

8.6.2.1 A junction assessment of the Glenville Road / Leicester Road simple priority junction has been completed. The results of the assessment are summarised in the table below with full input data and results enclosed in Appendix L.

Glenville Road / Leicester Road – AM Peak 0800-0900 – 2018						
	2018 Background		2018 Background + Development		Difference	
	Max RFC	Max Queue	Max RFC	Max Queue	Max RFC	Max Queue
B-C	0.11	0	0.50	1	0.39	1
B-A	0.32	0	0.63	2	0.31	2
C-AB	0.21	1	0.36	1	0.15	0

Table 8.6.2a

Glenville Road / Leicester Road – PM Peak 1700-1800 – 2018						
	2018 Background		2018 Background + Development		Difference	
	Max RFC	Max Queue	Max RFC	Max Queue	Max RFC	Max Queue
B-C	0.04	0	0.12	0	0.08	0
B-A	0.19	0	0.35	0	0.16	0
C-AB	0.10	0	0.41	2	0.31	2

Table 8.6.2b

8.6.2.2 It can be seen that the Glenville Road / Leicester Road junction operates within capacity in 2018 both without and with the proposed development during both peak periods.

8.6.3 J2: Leicester Road / Little Glen Road;

8.6.3.1 A junction assessment of the Leicester Road / Little Glen Road traffic signal controlled junction has been completed. The results of the assessment are summarised in the table below with full input data and results enclosed in Appendix M.

Leicester Road / Little Glen Road – AM Peak 0800-0900 – 2018						
	2018 Background		2018 Background + Development		Difference	
	DoS (%)	Mean Max Queue	DoS (%)	DoS (%)	Mean Max Queue	DoS (%)
A426 – Leics Road (N)						
A	83	19	85	21	2	2
Little Glen Road						
B-1	82	13	85	14	3	1
B-2	30	3	31	4	1	1
A426 – Leics Road (S)						
C-1	53	9	53	9	0	0
C-2	78	8	82	9	4	1

Table 8.6.3a

Leicester Road / Little Glen Road – AM Peak 1700-1800 – 2018						
	2018 Background		2018 Background + Development		Difference	
	DoS (%)	Mean Max Queue	DoS (%)	DoS (%)	Mean Max Queue	DoS (%)
A426 – Leics Road (N)						
A	92	21	92	21	0	0
Little Glen Road						
B-1	90	15	90	15	0	0
B-2	25	3	27	3	2	0
A426 – Leics Road (S)						
C-1	56	9	58	10	2	1
C-2	89	16	93	18	4	2

Table 8.6.3a

8.6.3.2 It can be seen that the Leicester Road / Little Glen Road junction will generally operate within capacity with Degree of Saturation (DoS) values below 90% in the morning peak period in 2018 both without and with the proposed development.

8.6.3.3 During the evening peak period the Leicester Road (North) arm of the junction is shown to be overcapacity in 2018 with a DoS value of 92% although this is unaffected by the proposed development. The remaining arms, Little Glen Road and Leicester Road (South) are within capacity with DoS values of 90% and 89% respectively. Little Glen Road remains within capacity with the proposed development, however, DoS values on Leicester Road (South) are increased by 4% resulting a maximum DoS value of 93%.

8.6.3.4 Whilst the proposed development will result in the Leicester Road (South) arm of the junction operating over capacity the predicted mean maximum queue length will only increase by 2 vehicles. Due to the small increase in queue length and limited opportunities for measures which will increase real capacity no mitigation measures are proposed.

8.6.4 J3: Leicester Road / Soar Valley Way / Glenhills Way

8.6.4.1 A junction assessment of the Leicester Road / Soar Valley Way / Glenhills Way traffic signal controlled junction has been completed. This junction was recently improved as part of the A426 Bus Corridor works with the purpose of improving journey times along the A426 for Buses. The results of the assessment are summarised in the table below with full input data and results enclosed in Appendix N.

Leicester Road / Soar Valley Way / Glenhills Way – AM Peak 0800-0900 – 2018

D-1	136	96	143	111	7	15
D-3	41	6	41	6	0	0

Table 8.6.4B

- 8.6.4.2 The above assessment is based on the geometry and signal phases / stages post completion of the A426 Bus Corridor Improvements. It can be seen that one traffic stream on each arm of the junction is predicted to operate above capacity in 2018 without the proposed development. Maximum Degree of Saturation (DoS) values of 143% were recorded during the peak period without the proposed development.
- 8.6.4.3 With the proposed development RFC values are increased on all arms with the exception of the A563 Soar Valley Way. The increase in Degree of Saturation is generally minor, however, the A426 Lutterworth Road (N) arm of the junction experiences the largest increase in DoS values with the values increasing by 14%.
- 8.6.4.4 The Leicester Road / Soar Valley Way / Glenhills Way junction has recently undergone works to improve its operation and maximise capacity at the junction. These works were aimed at improving bus journey times along the A426 corridor. Whilst the proposed development is predicated to have a slight impact on the operational capacity of the junction there are limited options available to improve the operation of the junction as the highway land is fully utilised therefore preventing the creation of new arms.
- 8.6.4.5 It is therefore proposed that no mitigation works will be completed at the junction and further emphasis will be placed within the Travel Plan to promote bus travel for new residents. As the A426 Bus Corridor Improvements will improve journey times making them more reliable bus travel should be considered an attractive form of transport for Leicester bound journeys which would have otherwise route through the junction.

8.6.5 J4 - Leicester Road / Middleton Street

8.6.5.1 A junction assessment of the Leicester Road / Middleton Street traffic signal controlled junction has been completed. The results of the assessment are summarised in the table below with full input data and results enclosed in Appendix O.

Leicester Road / Middleton Street – AM Peak 0800-0900 – 2018						
	2018 Background		2018 Background + Development		Difference	
	DoS (%)	Mean Max Queue	DoS (%)	DoS (%)	Mean Max Queue	DoS (%)

C-1	87	14	90	15	3	1

Table 8.6.5b

8.6.5.2 It can be seen that the Leicester Road / Middleton Street junction will operate within capacity in, with Degree of Saturation Values at or below 90%, in both peak periods during 2018 without and with the proposed development.

9.0 Public Consultation

9.1 A public consultation event was held on 28th January 2014 to inform and discuss the proposed development with local residents. At the consultation event a number of specific concerns were raised by residents regarding the use of the local highway infrastructure to access the development. These concerns are summarised as:

- The width of Glenville Avenue and West View Avenue are inadequate to serve the proposed development;
- The junction visibility of Glenville Avenue is poor.

9.2 Glenville Avenue and West View Avenue have widths of 6.2m and 6.1m respectively. In line with Manual for Streets widths of 5.5m and above are adequate for two lorries to pass. With the exception of Glen Hills School, two care homes and four businesses neither of which are retail shops the two roads serve dwellings. Therefore the majority of vehicles utilising the roads will be cars which only require 4.1m to pass in line with Manual for Streets. This allows 2.1m and 2.0m for cars to park on Glenville Avenue and West View Avenue respectively and not prohibit the free flow of vehicles.

9.3 A topographical survey of Glenville Avenue and Leicester Road shows that the junction has adequate junction visibility meeting the minimum 2.4m x 43m visibility for 30mph roads. To the left the maximum achievable visibility is 2.4m x 66m equivalent to the visibility distance required for a 40mph road. A drawing enclosed in Appendix P shows that the visibility splays are achievable in both the horizontal and vertical planes.

10.0 Conclusions

- 10.1 The proposed residential development is located to the south of Leicester and north of Blaby at land off Cork Lane, Leicester. The proposed development is bound by residential developments to the north and south, Cork Lane to the east and agricultural land to the west.
- 10.2 The proposed development will comprise up to 166 dwellings with associated highway infrastructure and public open space.
- 10.3 The proposed development is shown to be well served and accessible to more sustainable modes of transport. The proposed development has good accessibility to education, health, employment, retail and leisure facilities.
- 10.4 The proposed development will be accessed via an extension of Cork Lane.
- 10.5 The proposed development is not predicted to have an adverse impact on the sustainable transport infrastructure.
- 10.6 Junction assessments have been completed at 4 junctions within Leicester. It is shown that the proposed development does not have a significant adverse impact on the operation of any of these junctions.
- 10.7 Framework travel plans have been produced for the development. These Travel Plans which will be secured under a S106 agreement will target a reduction in single occupancy vehicle trips.
- 10.8 From the reported accident data there does not appear to be a significant accident problem on the surrounding highway infrastructure. We therefore do not consider that the proposed development will result in conditions detrimental to highway safety.
- 10.9 There are therefore no reasons on highway grounds why planning permission for the present development should not be granted.

Cycle Route Map

Collect the series of six cycling maps
 Latest versions available for download
 at www.leics.gov.uk/cycling

This map has been prepared in consultation with Leicester City Cycle City Workshop representing
 bike projects, clubs and organisations supporting cycling across Leicester

If you would like help in understanding the text on this leaflet in an alternative language or require it in a larger font/audio format please contact Leicester City Council on 0116 252 7000. The map section can be enlarged if required.

Users of these routes do so at their own risk. Refer to the good cycling tips inside this leaflet.

Leicester Bikeability 1-3
 4 lessons

Free child cycle training is on offer for every school in Leicester. Ask your school for details or email cyclistraining@leicester.gov.uk

Free adult cycle training is also available. See www.leicester.gov.uk/cyclistraining

Communter cycle training sign up your business and help get more people cycling to work. Email cyclistraining@leicester.gov.uk

Cycle Maintenance Training is on offer for all ages and abilities. Find out more at www.leicester.gov.uk/cyclechecks

£5000 Business Grants are available to promote 'sustainable transport' at www.leicester.gov.uk/184business

10 minutes?

What can you do in 10 minutes?

Learn, Why not take part in the Leicester 10 Minute Cycle Challenge. Open for 10 minutes anywhere, anytime to ride a mile.

www.leicester.gov.uk/cyclingchallenge

LEICESTER South

KEY

- Recommended route
- National Cycle Network (on-road / off-road)
- On-road surfaced / unsurfaced
- Footway
- Footway where you should walk your bike
- Footway where you should walk your bike
- Over-road cycle lane
- Bus lane
- One way
- Railway with station / Level crossing
- Cycle parking
- Traffic crossing
- Police crossing
- School / College / University
- Hospital
- Library
- Park and ride

© Crown copyright and database rights 2012
 Ordnance Survey 1000192884

LOOK OUT FOR THESE SIGNS

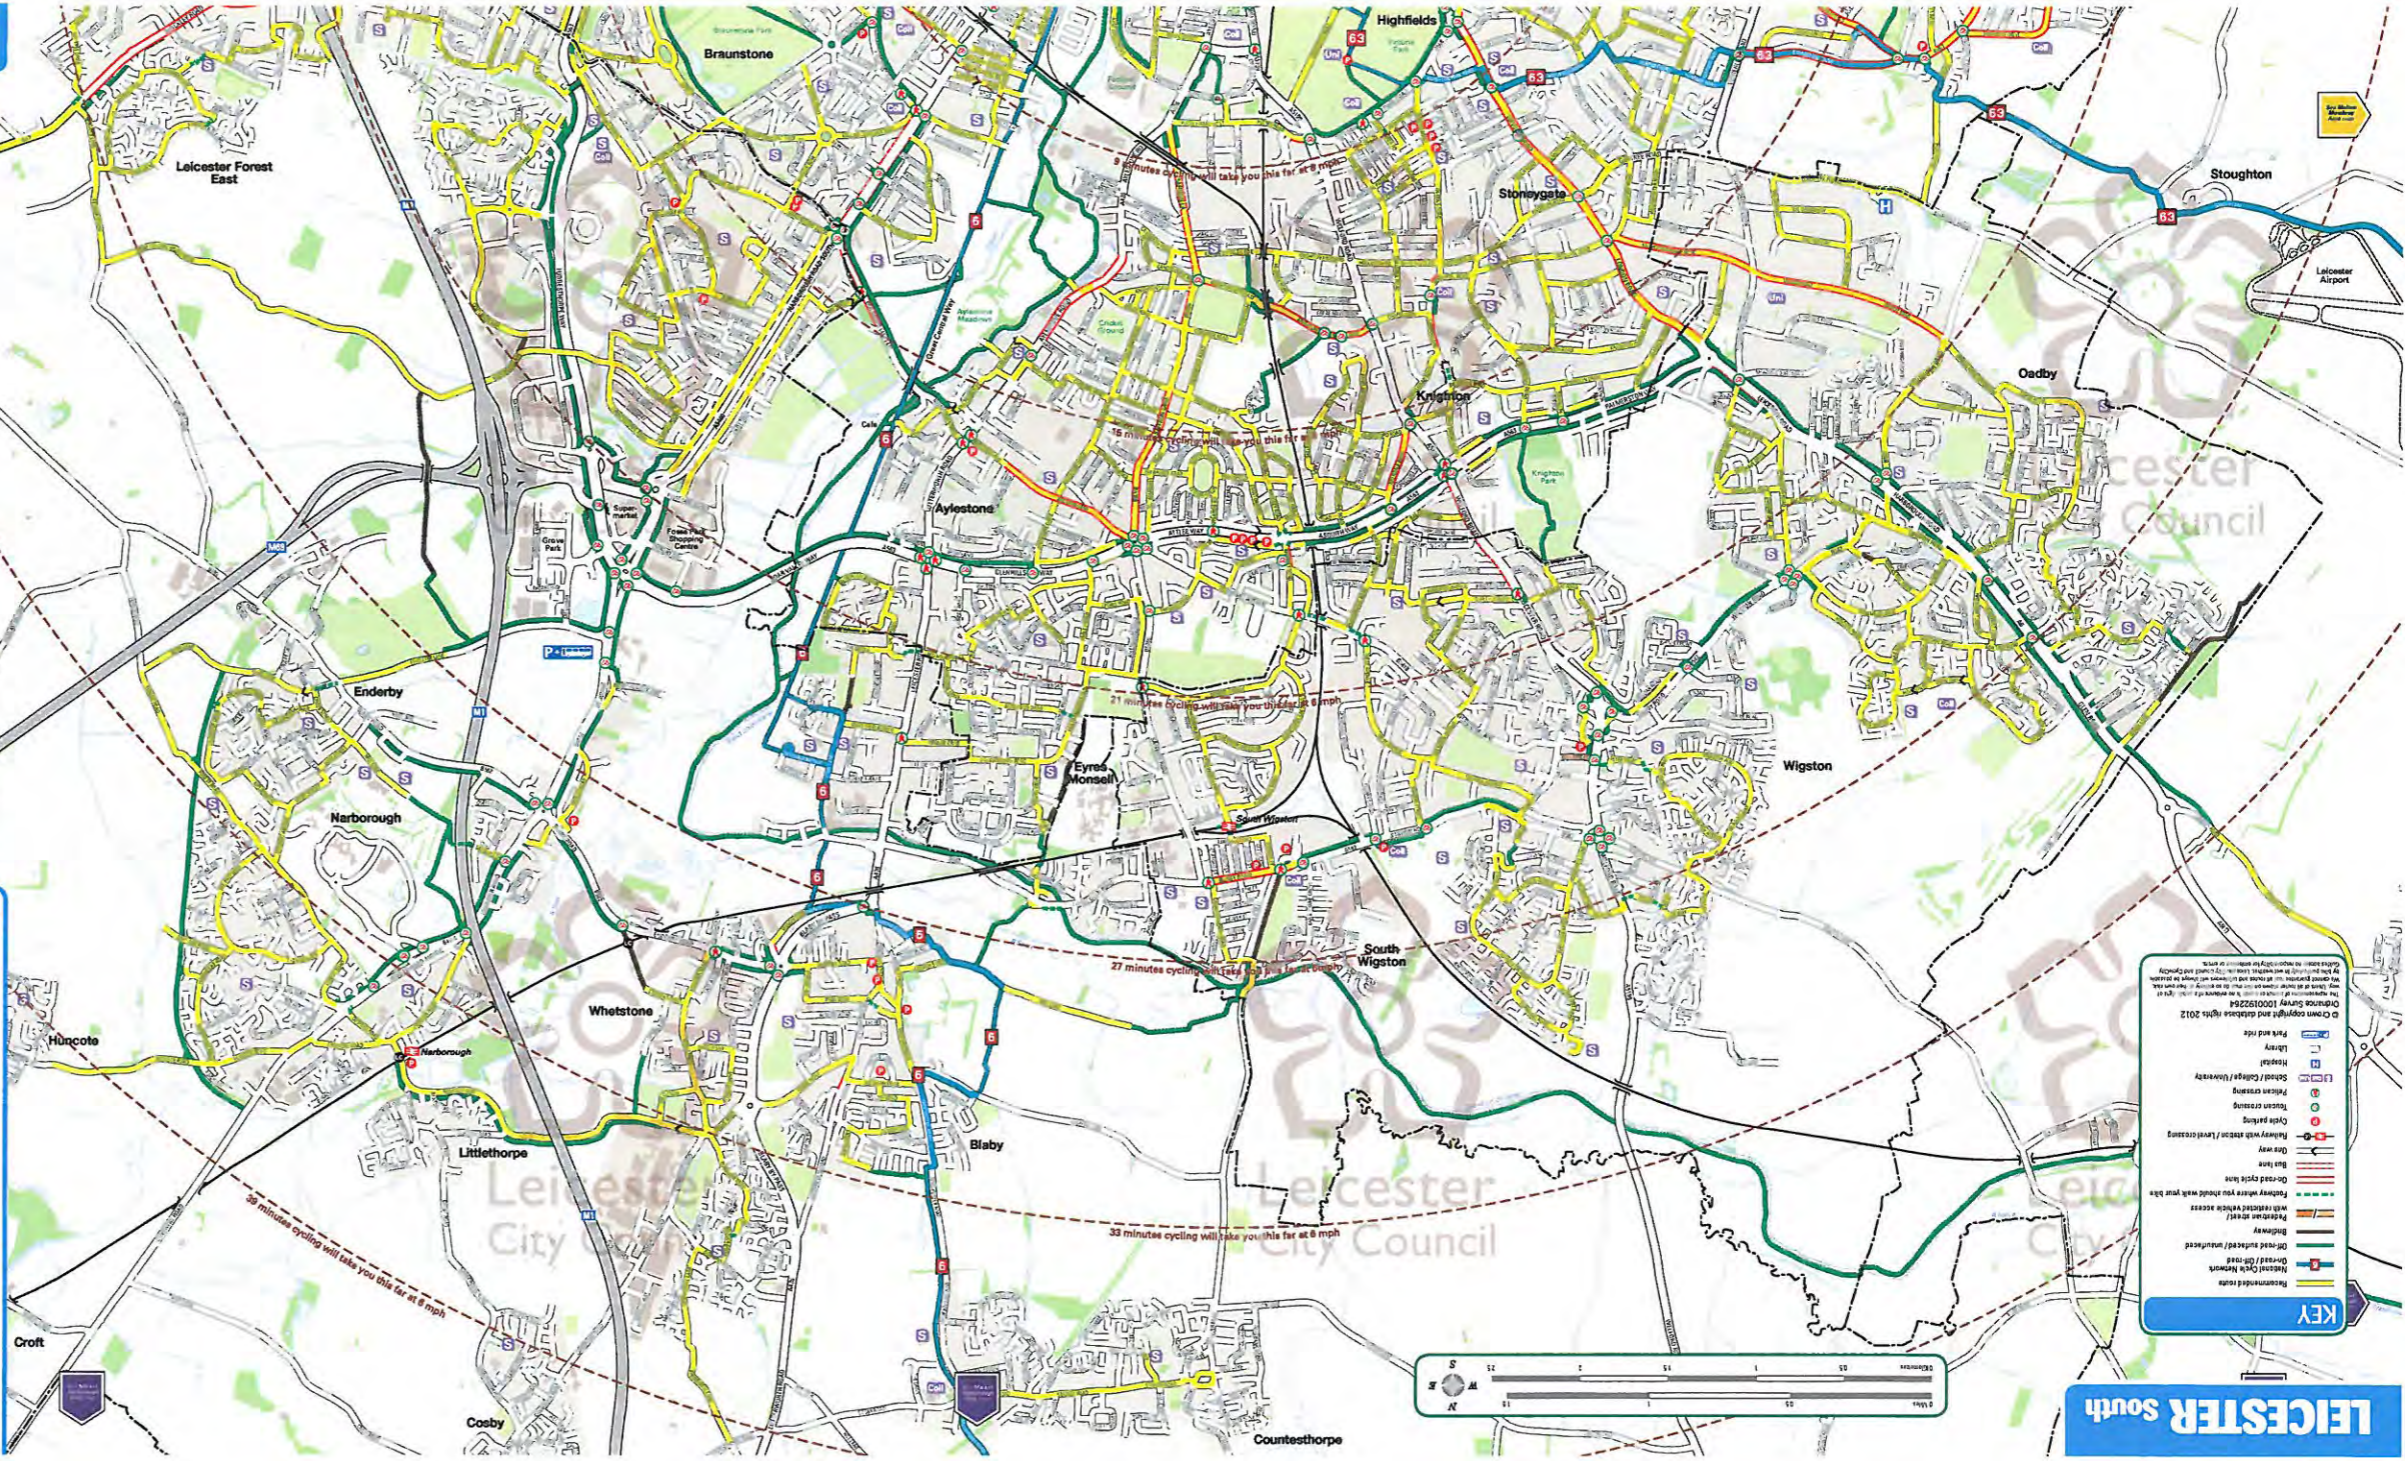

- Shared route for cyclists and pedestrians together
- Route for use by cyclists only
- Caution - cycle route ahead
- No cycling
- With-flow cycle lane ahead
- With-flow cycle lane
- Segregated route for cyclists and pedestrians on separate side of path
- Routes recommended for pedal cyclists (usually on road with no special provisions)
- Cycle parking
- Direction to cycle parking
- Direction sign showing route recommended for cyclists
- Direction sign for National Cycle Route
- Warning to drivers of cycle lane at junction

Advanced stop lines

Some signal-controlled junctions have advanced stop lines which allow cyclists to move into a 'safe area' ahead of motorists.

Cyclists must stop at the advanced cycle stop line and only proceed when the lights are green.

Motorists must stay behind the motor vehicle stop line and not obstruct the forward 'safe area'.

KEY

- Primary school
- Secondary school
- Hospital
- Police station
- Fire station
- Public house
- Post office

List of Appendices

A	Site Location Plan - JPP drawing no. R6711PP-TA01
B	Proposed Development
C	TRICS Trip Rates
D	Vehicle Trip Distribution
E	Vehicle Trip Data

1.0 Introduction

- 1.1 This report has been prepared to scope a Transport Assessment for a proposed residential development comprising 166 dwellings. The proposed development is located at land off Cork Lane, Glen Parva. Glen Parva is located to the south of Leicester and north of Blaby as shown on Figure 1 below.

Figure 1: Site Location Plan

- 1.2 This scoping document has been prepared with reference to Guidance on Transport Assessments published by the Department for Transport in 2007 and summarises the requirements for the contents of the TA in relation to the following:
- Traffic counts and traffic growth
 - Trip generation, distribution and assignment
 - Committed developments
 - Junction assessments
 - Accident analysis
 - Sustainable transport
- 1.3 The Transport Assessment will support an outline planning application with access unreserved.

2.0 Site Description and Development Proposals

2.1 Site Location

2.1.1 The proposed residential development is located at land off Cork Lane, Glen Parva. Glen Parva is located to the south of Leicester and north of Blaby as shown on the location plan in Figure 1 and enclosed in Appendix A. The proposed development is bound by residential development to the north and south, agricultural land to the west and Cork Lane to the east.

2.2 Development Description

2.2.1 The proposed development will comprise 166 residential dwellings.

2.2.2 The proposed development layout is shown on the plan enclosed in Appendix B.

2.3 Vehicular Access

2.3.1 The proposed development will provide a single all movements access off Cork Lane. The location of the accesses is shown on the plan enclosed in Appendix B.

2.4 Pedestrian and Cycle Access

2.4.1 The vehicle access for the development will provide pedestrians and cyclists with access into the development.

2.5 Parking

2.5.1 Car and cycle parking for the development will be provided in line with guidance set out in the 6Cs Design Guide.

2.6 Accessibility

2.6.1 The Transport Assessment will provide an assessment of the accessibility to key local facilities close to the development site by sustainable modes of transport. This will set out acceptable walking and cycling distances as well as providing a comparison of the work destinations based on current census data and destinations that are within the acceptable walking and cycling distance and public transport destinations.

2.6.2 A framework travel plan shall be prepared to supplement the TA.

2.7 Personnel Injury Accidents

- 2.7.1 Personnel injury accident records shall be obtained from Leicestershire County Council for the most recent five year period. The personnel injury accident records will be analysed to indentify any common accident cause, with particular reference to pedestrian and cyclists accidents.

3.0 Vehicular Impact Assessment

3.1 Introduction

3.1.1 This section will set out the parameters for the vehicular impact assessment and will define:

- The person trip generation rates;
- Travel Mode;
- Vehicle Trip Numbers;
- Proposed distribution and assignment;
- Committed developments / growth factors;
- Assessment years;
- Background Traffic; and
- Assessment locations.

3.2 Person Generation Rates

3.2.1 Person trip generation rates have been obtained from the TRICS database version 2013(6)v6.12.2. The TRICS data is enclosed in Appendix C. Person trip rates are shown in table 3.2.2 below.

		AM Peak (0800-0900)			PM Peak (1700-1800)		
		Arr	Dep	Total	Arr	Dep	Total
Dwellings	Person trips per dwelling	0.230	0.708	0.938	0.553	0.344	0.897

Table 3.2.2

3.3 Travel Mode

3.3.1 Travel to work data for the resident population of the Saxondale Ward has been obtained from the 2011 Census and is set out below in table 3.3.1. This will be used to assign the person trip rates for the development.

Method of Travel to Work Resident Population – Saxondale Ward 2011 Census

Mode	Percentage
Driving a Car or Van	73.6%
On Foot	8.3%
Bus, Minibus or Coach	6.5%
Passenger in a Car or Van	5.7%
Bicycle	4.0%
Train	0.8%
Motorcycle, Scooter or Moped	0.7%
Taxi	0.3%

Table 3.3.1

3.4 Vehicle Trip Numbers

3.4.1 From the trip generation rates and mode assignment data above the predicted number of vehicles which will be generated by the 166 dwelling development in the AM 0800-0900 and PM 1700-1800 peak periods can be calculated. These are shown in table 3.4.1 below full details are enclosed in Appendix D.

Predicted Vehicle Trip Numbers

		AM Peak (0800-0900)			PM Peak (1700-1800)		
		Arr	Dep	Total	Arr	Dep	Total
Dwellings	166 dwellings	28	86	115	68	42	110

Table 3.4.1

3.4.2 It can be seen that the proposed development is predicted to generate 115 and 110 vehicle trips in the morning and evening peak periods respectively. This equates to approximately one new vehicle on the highway network every 30 seconds.

3.5 Proposed distribution and assignment

- 3.5.1 Vehicle trip distribution data has been obtained from the 2001 Census Travel to Work data for the Saxondale ward. Proposed vehicle trips have been assigned to the highway network using online route planning software. Trip distribution and assignment calculations are shown in Appendix D.
- 5.8.1.2 From these assignment proportions the predicted number of new vehicles on the highway network can be calculated. The new vehicle trips at key locations can be seen on the drawings enclosed in Appendix E.

3.6 Committed developments / growth factors

- 3.6.1 We are not aware of any significant committed developments within the vicinity of the proposed development. Therefore background traffic will be growthed utilising the most recent release of NTEM and NTM growth factors.

3.7 Assessment years

- 3.7.1 A planning application will be submitted in 2013 therefore junction analysis will be completed for assessment years of 2015 (opening) and 2018 (five years post registration) in line with guidance set out with Department of Transport publication 'Guidance for Transport Assessment'.

3.8 Background Traffic

- 3.8.1 Background traffic counts will be completed in November 2013 at each of the junctions identified for assessment below. Classified turning counts will be completed for the periods 0730-0930 and 1630-1830.

3.9 Assessment locations

- 3.9.1 Assessment of vehicle impact will be completed at the junctions listed below. All of these junctions are predicted to have an increase of one-way vehicle trips of 30 or greater. A 30 trip threshold is selected as this is 50% below the threshold for a Transport Assessment identified in 'Guidance for Transport Assessment' Appendix B which recommends a transport assessment for any development generating 30 or more two-way vehicle trips.

- Glenville Road / Leicester Road;
- Leicester Road / Little Glen Road;
- Leicester Road / Soar Valley Way / Glenhills Way; and
- Leicester Road / Middleton Street.

4.0 Summary

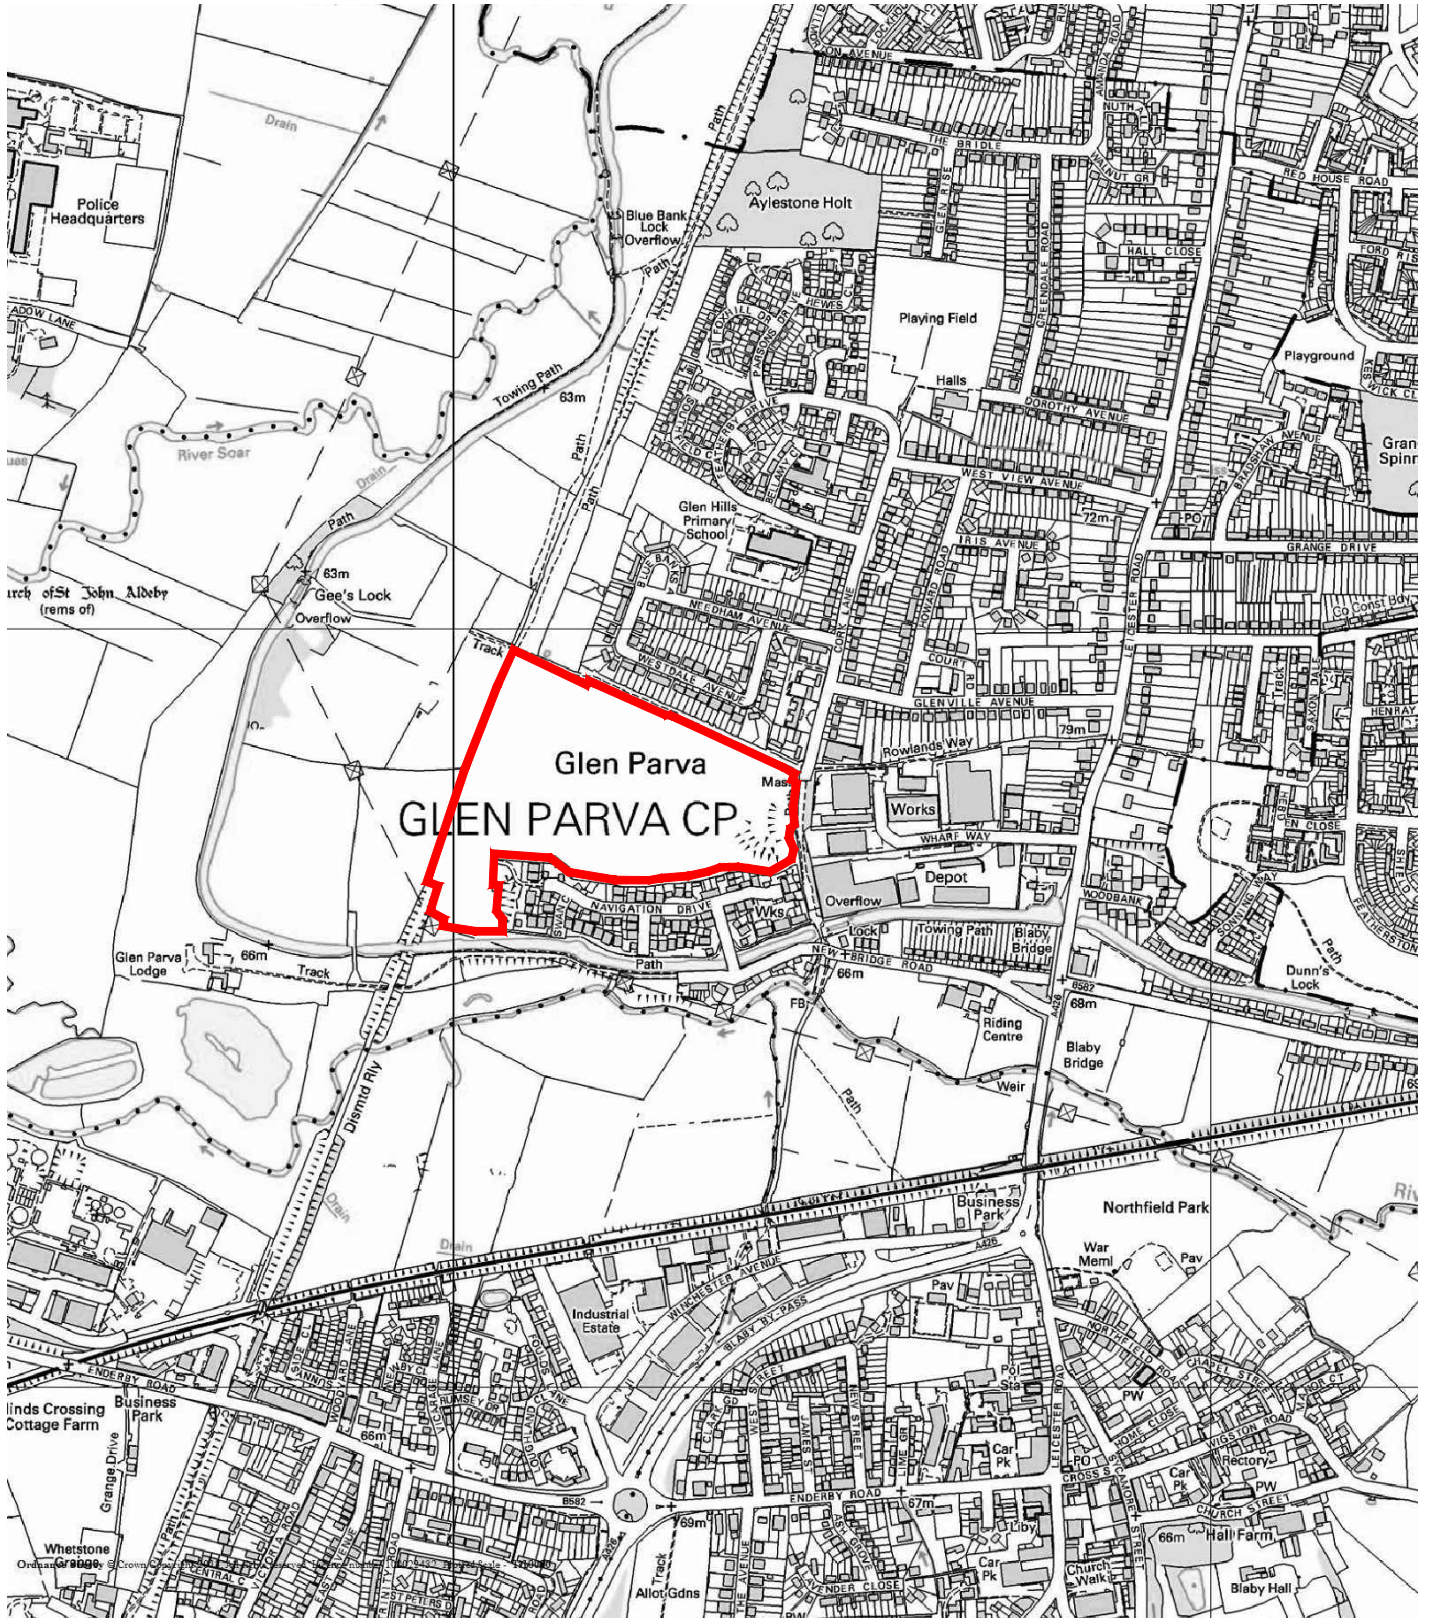

- 4.1 This scoping report for a Transport Assessment for a residential development has provided information on the issues proposed to be considered in the Transport Assessment. It has also provided information on the proposed arrangements for access and vehicular impact assessment.

Appendix C
TRICS Trip Rates

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 03 - RESIDENTIAL
 Category : A - HOUSES PRIVATELY OWNED
 MULTI-MODAL TOTAL PEOPLE

Selected regions and areas:

03	SOUTH WEST	
	CW CORNWALL	2 days
04	EAST ANGLIA	
	CA CAMBRIDGESHIRE	1 days
	NF NORFOLK	2 days
	SF SUFFOLK	2 days
05	EAST MIDLANDS	
	DS DERBYSHIRE	1 days
	LN LINCOLNSHIRE	2 days
06	WEST MIDLANDS	
	SH SHROPSHIRE	1 days
	ST STAFFORDSHIRE	1 days
	WK WARWICKSHIRE	1 days
	WM WEST MIDLANDS	2 days
	WO WORCESTERSHIRE	2 days
07	YORKSHIRE & NORTH LINCOLNSHIRE	
	NY NORTH YORKSHIRE	2 days
08	NORTH WEST	
	CH CHESHIRE	2 days
	MS MERSEYSIDE	1 days
09	NORTH	
	TV TEES VALLEY	1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Filtering Stage 2 selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Number of dwellings
 Actual Range: 6 to 372 (units:)
 Range Selected by User: 6 to 491 (units:)

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/05 to 23/10/12

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Monday	2 days
Tuesday	8 days
Wednesday	3 days
Thursday	6 days
Friday	4 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	23 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.

Selected Locations:

Suburban Area (PPS6 Out of Centre)	21
Neighbourhood Centre (PPS6 Local Centre)	2

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Residential Zone	20
No Sub Category	3

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Filtering Stage 3 selection:

Use Class:

C3	22 days
----	---------

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 1 mile:

1,001 to 5,000	2 days
5,001 to 10,000	2 days
10,001 to 15,000	4 days
15,001 to 20,000	8 days
20,001 to 25,000	4 days
25,001 to 50,000	3 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

5,001 to 25,000	2 days
25,001 to 50,000	2 days
50,001 to 75,000	1 days
75,001 to 100,000	6 days
100,001 to 125,000	3 days
125,001 to 250,000	5 days
250,001 to 500,000	4 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.5 or Less	1 days
0.6 to 1.0	9 days
1.1 to 1.5	13 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

No	23 days
----	---------

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

This section provides a list of all survey sites and days in the selected set. For each individual survey site, it displays a unique site reference code and site address, the selected trip rate calculation parameter and its value, the day of the week and date of each survey, and whether the survey was a manual classified count or an ATC count.

Total Rates:			3.827			4.139			7.966

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: $COUNT/TRP*FACT$. Trip rates are then rounded to 3 decimal places.

Parameter summary

Trip rate parameter range selected: 6 - 372 (units:)
 Survey date date range: 01/01/05 - 23/10/12
 Number of weekdays (Monday-Friday): 23
 Number of Saturdays: 0
 Number of Sundays: 0
 Surveys manually removed from selection: 0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are shown. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

Subject: 2013/HEN/2091 Cork Lane Glen Parva

Martin

Firstly my apologies for the delay in responding to your email and scoping report.

The scoping note is generally acceptable but as discussed the A426 suffers from congestion in the peak periods and you will need to demonstrate the development either has no significant impacts, or those impacts can be mitigated. I have the following general comments:

- The trip rates will need checking when the planning application is submitted, however the rates do not appear to be 85th percentile rates as required in the 6CsDG
- We will have to confirm the 2011 census data
- We are not aware of any committed developments in the vicinity but we recommend you confirm this with the City as the site is near the County/City boundary
- 5 year completion date is reasonable and 2018 is acceptable
- The junction assessment appears reasonable however we may request further junctions to be assessed if we feel it is justified
- We note that the traffic counts will be carried out in a non-neutral month therefore the 85th% trip rates are even more relevant

Subject: RE: R6711PP - 166 Dwel Development, Land off Cork Lane, Glen Parva

Martin, I have had a look at the Scoping Study and I have no problems with your approach.

I would expect Leics County to check trip generation. I doubt that the trips generated will have significant affect upon the highway network – given that the junctions on the A426 have recently been improved as part of the Bus Priority scheme this is something that would need to be considered by that Project Team (One for you Matt!!!)

To: 'matt.lennon@leics.gov.uk'; Michael Jeeves
Subject: R6711PP - 166 Dwel Development, Land off Cork Lane, Glen Parva

Matt / Michael,

Further to conversations with your colleagues I attach a Transport Assessment Scoping Note for a 166 dwelling development located off Cork Lane, Glen Parva. The development is located within Blaby District but based on distribution data is likely to have a larger impact on City controlled roads.

The scoping note is a brief document which primarily defines the:

- predicted person trip rates;
- vehicle trip numbers;
- distribution based on census data; and
- junctions to be assessed.

I would welcome your input into the scope of the Transport Assessment and confirmation that the extent of assessment is considered appropriate. Please call me to discuss if required. I am happy to attend a joint meeting to discuss the application if that is appropriate.

Regards,
Martin Andrews

Appendix H
TRICS Data

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 03 - RESIDENTIAL
Category : A - HOUSES PRIVATELY OWNED
MULTI-MODAL TOTAL PEOPLE

Selected regions and areas:

03	SOUTH WEST	
	CW CORNWALL	2 days
04	EAST ANGLIA	
	CA CAMBRIDGESHIRE	1 days
	NF NORFOLK	2 days
	SF SUFFOLK	2 days
05	EAST MIDLANDS	
	DS DERBYSHIRE	1 days
	LN LINCOLNSHIRE	2 days
06	WEST MIDLANDS	
	SH SHROPSHIRE	1 days
	ST STAFFORDSHIRE	1 days
	WK WARWICKSHIRE	1 days
	WM WEST MIDLANDS	2 days
	WO WORCESTERSHIRE	2 days
07	YORKSHIRE & NORTH LINCOLNSHIRE	
	NY NORTH YORKSHIRE	2 days
08	NORTH WEST	
	CH CHESHIRE	2 days
	MS MERSEYSIDE	2 days
09	NORTH	
	TV TEES VALLEY	1 days
	TW TYNE & WEAR	1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Filtering Stage 2 selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Number of dwellings
 Actual Range: 6 to 372 (units:)
 Range Selected by User: 6 to 491 (units:)

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/05 to 07/10/13

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Monday	3 days
Tuesday	8 days
Wednesday	3 days
Thursday	6 days
Friday	5 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	25 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.

Selected Locations:

Suburban Area (PPS6 Out of Centre)	23
Neighbourhood Centre (PPS6 Local Centre)	2

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Residential Zone	22
No Sub Category	3

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Filtering Stage 3 selection:

Use Class:

C3	24 days
----	---------

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Filtering Stage 3 selection (Cont.):

Population within 1 mile:

1,001 to 5,000	2 days
5,001 to 10,000	3 days
10,001 to 15,000	4 days
15,001 to 20,000	8 days
20,001 to 25,000	4 days
25,001 to 50,000	4 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

5,001 to 25,000	2 days
25,001 to 50,000	2 days
50,001 to 75,000	1 days
75,001 to 100,000	6 days
100,001 to 125,000	3 days
125,001 to 250,000	5 days
250,001 to 500,000	6 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.5 or Less	1 days
0.6 to 1.0	11 days
1.1 to 1.5	13 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

No	25 days
----	---------

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

This section provides a list of all survey sites and days in the selected set. For each individual survey site, it displays a unique site reference code and site address, the selected trip rate calculation parameter and its value, the day of the week and date of each survey, and whether the survey was a manual classified count or an ATC count.

This section displays actual (not average) trip rates for each of the survey days in the selected set, and ranks them in order of relative trip rate intensity, for a given time period (or peak period irrespective of time) selected by the user. The count type and direction are both displayed just above the table, along with the rows within the table representing the 85th and 15th percentile trip rate figures (highlighted in bold within the table itself).

The table itself displays details of each individual survey, alongside arrivals, departures and totals trip rates, sorted by whichever of the three directional options has been chosen by the user. As with the preceding trip rate calculation results table, the trip rates shown are per the calculation factor (e.g. per 100m² GFA, per employee, per hectare, etc). Note that if the peak period option has been selected (as opposed to a specific chosen time period), the peak period for each individual survey day in the table is also displayed.

This graph is a visual representation of the correlation between the selected trip rate calculation parameter and the rank order trip rates generated by each individual survey day in the selected set. The range of the trip rate parameter is shown along the x axis, with the level of trips shown on the y axis. The selected time range used to create the rank order list from which the graph is derived is displayed at the top of the graph (unless the peak period irrespective of time range has been selected). A line of best fit is sometimes displayed in the graph, should it be selected for inclusion by the user.

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 03 - RESIDENTIAL
Category : A - HOUSES PRIVATELY OWNED
MULTI-MODAL TOTAL PEOPLE

Selected regions and areas:

03	SOUTH WEST	
	CW CORNWALL	2 days
04	EAST ANGLIA	
	CA CAMBRIDGESHIRE	1 days
	NF NORFOLK	2 days
	SF SUFFOLK	2 days
05	EAST MIDLANDS	
	DS DERBYSHIRE	1 days
	LN LINCOLNSHIRE	2 days
06	WEST MIDLANDS	
	SH SHROPSHIRE	1 days
	ST STAFFORDSHIRE	1 days
	WK WARWICKSHIRE	1 days
	WM WEST MIDLANDS	2 days
	WO WORCESTERSHIRE	2 days

	CH CHESHIRE	2 days
	MS MERSEYSIDE	2 days
09	NORTH	
	TV TEES VALLEY	1 days
	TW TYNE & WEAR	1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Filtering Stage 2 selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Number of dwellings
 Actual Range: 6 to 372 (units:)
 Range Selected by User: 6 to 491 (units:)

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/05 to 07/10/13

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Monday	3 days
Tuesday	8 days
Wednesday	3 days
Thursday	6 days
Friday	5 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	25 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.

Selected Locations:

Suburban Area (PPS6 Out of Centre)	23
Neighbourhood Centre (PPS6 Local Centre)	2

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Residential Zone	22
No Sub Category	3

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Filtering Stage 3 selection:

Use Class:

C3	24 days
----	---------

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Filtering Stage 3 selection (Cont.):

Population within 1 mile:

1,001 to 5,000	2 days
5,001 to 10,000	3 days
10,001 to 15,000	4 days
15,001 to 20,000	8 days
20,001 to 25,000	4 days
25,001 to 50,000	4 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

5,001 to 25,000	2 days
25,001 to 50,000	2 days
50,001 to 75,000	1 days
75,001 to 100,000	6 days
100,001 to 125,000	3 days
125,001 to 250,000	5 days
250,001 to 500,000	6 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.5 or Less	1 days
0.6 to 1.0	11 days
1.1 to 1.5	13 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

No	25 days
----	---------

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

This section displays actual (not average) trip rates for each of the survey days in the selected set, and ranks them in order of relative trip rate intensity, for a given time period (or peak period irrespective of time) selected by the user. The count type and direction are both displayed just above the table, along with the rows within the table representing the 85th and 15th percentile trip rate figures (highlighted in bold within the table itself).

The table itself displays details of each individual survey, alongside arrivals, departures and totals trip rates, sorted by whichever of the three directional options has been chosen by the user. As with the preceding trip rate calculation results table, the trip rates shown are per the calculation factor (e.g. per 100m2 GFA, per employee, per hectare, etc). Note that if the peak period option has been selected (as opposed to a specific chosen time period), the peak period for each individual survey day in the table is also displayed.

This graph is a visual representation of the correlation between the selected trip rate calculation parameter and the rank order trip rates generated by each individual survey day in the selected set. The range of the trip rate parameter is shown along the x axis, with the level of trips shown on the y axis. The selected time range used to create the rank order list from which the graph is derived is displayed at the top of the graph (unless the peak period irrespective of time range has been selected). A line of best fit is sometimes displayed in the graph, should it be selected for inclusion by the user.

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 03 - RESIDENTIAL
Category : A - HOUSES PRIVATELY OWNED
MULTI-MODAL TOTAL PEOPLE

Selected regions and areas:

03	SOUTH WEST	
	CW CORNWALL	2 days
04	EAST ANGLIA	
	CA CAMBRIDGESHIRE	1 days
	NF NORFOLK	2 days
	SF SUFFOLK	2 days
05	EAST MIDLANDS	
	DS DERBYSHIRE	1 days
	LN LINCOLNSHIRE	2 days
06	WEST MIDLANDS	
	SH SHROPSHIRE	1 days
	ST STAFFORDSHIRE	1 days
	WK WARWICKSHIRE	1 days
	WM WEST MIDLANDS	2 days
	WO WORCESTERSHIRE	2 days

09	NORTH	
	TV TEES VALLEY	1 days
	TW TYNE & WEAR	1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Filtering Stage 2 selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Number of dwellings
 Actual Range: 6 to 372 (units:)
 Range Selected by User: 6 to 491 (units:)

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/05 to 07/10/13

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Monday	3 days
Tuesday	8 days
Wednesday	3 days
Thursday	6 days
Friday	5 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	25 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.

Selected Locations:

Suburban Area (PPS6 Out of Centre)	23
Neighbourhood Centre (PPS6 Local Centre)	2

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Residential Zone	22
No Sub Category	3

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Filtering Stage 3 selection:

Use Class:

C3	24 days
----	---------

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Filtering Stage 3 selection (Cont.):

Population within 1 mile:

1,001 to 5,000	2 days
5,001 to 10,000	3 days
10,001 to 15,000	4 days
15,001 to 20,000	8 days
20,001 to 25,000	4 days
25,001 to 50,000	4 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

5,001 to 25,000	2 days
25,001 to 50,000	2 days
50,001 to 75,000	1 days
75,001 to 100,000	6 days
100,001 to 125,000	3 days
125,001 to 250,000	5 days
250,001 to 500,000	6 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.5 or Less	1 days
0.6 to 1.0	11 days
1.1 to 1.5	13 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

No	25 days
----	---------

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

This section displays actual (not average) trip rates for each of the survey days in the selected set, and ranks them in order of relative trip rate intensity, for a given time period (or peak period irrespective of time) selected by the user. The count type and direction are both displayed just above the table, along with the rows within the table representing the 85th and 15th percentile trip rate figures (highlighted in bold within the table itself).

The table itself displays details of each individual survey, alongside arrivals, departures and totals trip rates, sorted by whichever of the three directional options has been chosen by the user. As with the preceding trip rate calculation results table, the trip rates shown are per the calculation factor (e.g. per 100m2 GFA, per employee, per hectare, etc). Note that if the peak period option has been selected (as opposed to a specific chosen time period), the peak period for each individual survey day in the table is also displayed.

This graph is a visual representation of the correlation between the selected trip rate calculation parameter and the rank order trip rates generated by each individual survey day in the selected set. The range of the trip rate parameter is shown along the x axis, with the level of trips shown on the y axis. The selected time range used to create the rank order list from which the graph is derived is displayed at the top of the graph (unless the peak period irrespective of time range has been selected). A line of best fit is sometimes displayed in the graph, should it be selected for inclusion by the user.

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 03 - RESIDENTIAL
Category : A - HOUSES PRIVATELY OWNED
MULTI-MODAL TOTAL PEOPLE

Selected regions and areas:

03	SOUTH WEST	
	CW CORNWALL	2 days
04	EAST ANGLIA	
	CA CAMBRIDGESHIRE	1 days
	NF NORFOLK	2 days
	SF SUFFOLK	2 days
05	EAST MIDLANDS	
	DS DERBYSHIRE	1 days
	LN LINCOLNSHIRE	2 days
06	WEST MIDLANDS	
	SH SHROPSHIRE	1 days
	ST STAFFORDSHIRE	1 days
	WK WARWICKSHIRE	1 days
	WM WEST MIDLANDS	2 days
	WO WORCESTERSHIRE	2 days
07	YORKSHIRE & NORTH LINCOLNSHIRE	
	NY NORTH YORKSHIRE	2 days
08	NORTH WEST	
	CH CHESHIRE	2 days
	MS MERSEYSIDE	2 days
09	NORTH	
	TV TEES VALLEY	1 days
	TW TYNE & WEAR	1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Filtering Stage 2 selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Number of dwellings
 Actual Range: 6 to 372 (units:)
 Range Selected by User: 6 to 491 (units:)

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/05 to 07/10/13

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Monday	3 days
Tuesday	8 days
Wednesday	3 days
Thursday	6 days
Friday	5 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	25 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.

Selected Locations:

Suburban Area (PPS6 Out of Centre)	23
Neighbourhood Centre (PPS6 Local Centre)	2

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Residential Zone	22
No Sub Category	3

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Filtering Stage 3 selection:

Use Class:

C3	24 days
----	---------

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Filtering Stage 3 selection (Cont.):

Population within 1 mile:

1,001 to 5,000	2 days
5,001 to 10,000	3 days
10,001 to 15,000	4 days
15,001 to 20,000	8 days
20,001 to 25,000	4 days
25,001 to 50,000	4 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

5,001 to 25,000	2 days
25,001 to 50,000	2 days
50,001 to 75,000	1 days
75,001 to 100,000	6 days
100,001 to 125,000	3 days
125,001 to 250,000	5 days
250,001 to 500,000	6 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.5 or Less	1 days
0.6 to 1.0	11 days
1.1 to 1.5	13 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

No	25 days
----	---------

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

This section provides a list of all survey sites and days in the selected set. For each individual survey site, it displays a unique site reference code and site address, the selected trip rate calculation parameter and its value, the day of the week and date of each survey, and whether the survey was a manual classified count or an ATC count.

Appendix A – Vehicle Categories

Appendix B – Classified Count Data

Appendix C – Automatic Traffic Count Data

INTRODUCTION

Nationwide Data Collection (NDC) was instructed by JPP Consulting to undertake classified turning counts and automatic traffic counts in Glen Parva, Leicestershire. A general location plan is given in Diagram 1.

Classified Turning Counts

Classified turning counts were undertaken at the following junctions:

- Site 1 – A426 Leicester Road / Glenville Avenue
- Site 2 – A426 Leicester Road / Little Glen Road
- Site 3 – A563 Soar Valley Way / A563 Glenhills Way / A426
- Site 4 – A426 Aylestone Road / Middleton Street

All sites were surveyed using telescopically mounted video cameras from which the information was subsequently extracted. The surveys were carried out on Tuesday 3rd December 2013 and survey hours were 07:30 to 09:30 and 16:30 to 18:30. All information was collected in fifteen-minute intervals and has been tabulated with both hourly and period totals. Details of the observed movements are given in Drawings 3517-01 & 02.

Vehicles were classified into the following categories:

Cars and taxis (**CAR**), Light Goods Vehicles (**LGV**), Other Goods Vehicles type 1 (**OGV1**), Other Goods Vehicles type 2 (**OGV2**), Public Service Vehicles (**PSV**) and Motorcycles (**MCL**).

A detailed description of the vehicles included in each category is included in Appendix A. The results of the classified counts are contained in Appendix B.

Automatic Traffic Counts

Metrocount 5600 series automatic traffic counters, attached to pneumatic tubes, were installed at the following locations:

- Site 1 – Leicester Road, attached to Industrial Estate sign - OSGR: SP 56832 98740
- Site 2 – Little Glen Road, attached to Direction sign - OSGR: SP 56901 98518
- Site 3 – Enderby Road, attached to lamp column No.4 - OSGR: SP 56068 97862

The counters were installed for a period of 1 week commencing Tuesday 3rd December 2013. Data collection was interrupted at Site 1 and Site 2 due to tubes breaking and water in the tube. These sites were left down to count for a further week. Data collection was again interrupted from 16:00 on Tuesday 14th December 2013 to 11:00 Wednesday 15th December 2013; repairs were made at the earliest opportunity.

The resulting data files have been analysed to produce speed and class data at hourly intervals. Details of the vehicle categories & speed bin classifications are given in Appendix A, and a copy of the data is included in Appendix C.

Site Notes

The weather was recorded as dry, mild and overcast and there were no incidents or accidents likely to have had an effect on the results.

All data has been emailed to martin.andrews@jppuk.net.

<p>BUSES & COACHES (PSV)</p>	<p>DOUBLE DECK BUS SINGLE DECK BUS OR COACH</p>

COBA VEHICLE CATEGORIES

Definition of Categories

The various components of traffic have different characteristics in terms of operating costs, growth and occupancy. The most common categories into which the traffic is split in COBA; these are defined as:

Cars (CARS)

Including taxis, estate cars, 'people carriers' and other passenger vehicles (for example, minibuses and camper vans) with a gross vehicle weight of less than 3.5 tonnes, normally ones which can accommodate not more than 15 seats. Three-wheeled cars, motor invalid carriages, Land Rovers, Range Rovers and Jeeps and smaller ambulances are included. Cars towing caravans or trailers are counted as one vehicle unless included as a separate class.

Light Goods Vehicles (LGV)

Includes all goods vehicles up to 3.5 tonnes gross vehicle weight (goods vehicles over 3.5 tonnes have sideguards fitted between axles), including those towing a trailer or caravan. This includes all car delivery vans and those of the next larger carrying capacity such as transit vans. Included here are small pickup vans, three-wheeled goods vehicles, milk floats and pedestrian controlled motor vehicles. Most of this group is delivery vans of one type or another.

Other Goods Vehicles (OGV 1)

Includes all rigid vehicles over 3.5 tonnes gross vehicle weight with two or three axles Includes larger ambulances, tractors (without trailers), road rollers for tarmac pressing, box vans and similar large vans. A two or three axle motor tractive unit without a trailer is also included.

Other Goods Vehicles (OGV 2)

This category includes all rigid vehicles with four or more axles and all articulated vehicles. Also included in this class are OGV1 goods vehicles towing a caravan or trailer.

Buses and Coaches (PSV)

Includes all public service vehicles and works buses with a gross vehicle weight of 3.5 tonnes or more, usually vehicles with more than 16 seats.

ATC VEHICLE CATEGORIES

Axles	Groups	Description	Class		Parameters	Dominant Vehicle	Aggregate
2	1 or 2	Very Short - Bicycle or Motorcycle	MC	1	d(1)<1.7m & axles=2		
2	1 or 2	Short - Sedan, Wagon, 4WD, Utility, Light Van	SV	2	d(1)>=1.7m, d(1)<=3.2m & axles=2		
3, 4 or 5	3	Short Towing - Trailer, Caravan, Boat, etc.	SVT	3	groups=3, d(1)>=2.1m, d(1)<=3.2m, d(2)>=2.1m & axles=3,4,5		1 (Light)
2	2	Two axle truck or Bus	TB2	4	d(1)>3.2m & axles=2		2 (Medium)
3	2	Three axle truck or Bus	TB3	5	axles=3 & groups=2		
>3	2	Four axle truck	T4	6	axles>3 & groups=2		
3	3	three axle articulated vehicle or Rigid vehicle and trailer	ART3	7	d(1)>3.2m, axles=3 & groups=3		3 (Heavy)
4	>2	Four axle articulated vehicle or Rigid vehicle and trailer	ART4	8	d(2)<2.1m or d(1)<2.1m or d(1)>3.2m axles = 4 & groups>2		
5	>2	Five axle articulated vehicle or Rigid vehicle and trailer	ART5	9	d(2)<2.1m or d(1)<2.1m or d(1)>3.2m axles=5 & groups>2		
>=6	>2	six (or more) axle articulated vehicle or Rigid vehicle and trailer	ART6	10	axles=6 & groups>2 or axles>6 & groups=3		
>6	4	B-Double or Heavy truck and trailer	BD	11	groups=4 & axles>6		3 (Heavy)
>6	>=5	Double or triple road train or Heavy truck and two (or more) trailers	DRT	12	groups>=5 & axles>6		

ATC SPEED BINS & DATA HEADINGS

Heading	Description
0 - 5	Speed bin totals 0 - 5 mph
5 - 10	Speed bin totals 5 - 10 mph
10 - 15	Speed bin totals 10 - 15 mph
15 - 20	Speed bin totals 15 - 20 mph
20 - 25	Speed bin totals 20 - 25 mph
25 - 30	Speed bin totals 25 - 30 mph
30 - 35	Speed bin totals 30 - 35 mph
35 - 40	Speed bin totals 35 - 40 mph
40 - 45	Speed bin totals 40 - 45 mph
45 - 50	Speed bin totals 45 - 50 mph
50 - 55	Speed bin totals 50 - 55 mph
55 - 60	Speed bin totals 55 - 60 mph
60 - 65	Speed bin totals 60 - 65 mph
65 - 70	Speed bin totals 65 - 70 mph
70 - 75	Speed bin totals 70 - 75 mph
75 - 80	Speed bin totals 75 - 80 mph
80 - 85	Speed bin totals 80 - 85 mph
85 - 90	Speed bin totals 85 - 90 mph
90 - 95	Speed bin totals 90 - 95 mph
95 - 100	Speed bin totals 95 - 100 mph
100 - 105	Speed bin totals 100 - 105 mph
105 - 110	Speed bin totals 105 - 110 mph
110 - 115	Speed bin totals 110 - 115 mph
115 - 120	Speed bin totals 115 - 120 mph
120 - 125	Speed bin totals 120 - 125 mph
125 - 130	Speed bin totals 125 - 130 mph
130 - 135	Speed bin totals 130 - 135 mph
135 - 140	Speed bin totals 135 - 140 mph

Heading	Description
>PSL	Greater than the posted speed limit
>PSL%	Greater than the posted speed limit as a percentage
>SL1 ACPO	Greater than ACPO (Association of Chief Police Officers) standard. ACPO is PSL x 10%+2mph
>SL1% ACPO	Greater than ACPO displayed as a percentage
>SL2 DfT	Greater than DfT (Department For Transport) standard. DfT is PSL plus 15mph.
>SL2% DfT	Greater than DfT displayed as a percentage
Mean	Average speed
Vpp 85	85th percentile speed

Summary of junction performance

AM					
	Queue (PCU)	Delay (s)	RFC	LOS	Junction Delay (s)
A1 - 2018 Back					
Stream B-C	0.12	8.80	0.11	A	10.57
Stream B-A	0.46	28.06	0.32	D	
Stream C-AB	0.73	4.66	0.21	A	
Stream C-A	-	-	-	-	
Stream A-B	-	-	-	-	
Stream A-C	-	-	-	-	

Values shown are the maximum values over all time segments. Delay is the maximum value of average delay per arriving vehicle. Junction LOS and Junction Delay are demand-weighted averages.

- 'D1 - 2018 Back, AM' model duration: 07:45 - 09:15
- 'D2 - 2018 Back + Dev, AM' model duration: 07:45 - 09:15
- 'D3 - 2018 Back, PM' model duration: 16:45 - 18:15
- 'D4 - 2018 Back + Dev, PM' model duration: 16:45 - 18:15

Run using Junctions 8.0.2.316 at 24/01/2014 15:36:53

Junction Network

Junctions

Name	Junction Type	Major Road Direction	Arm Order	Do Geometric Delay	Junction Delay (s)	Junction LOS
(untitled)	T-Junction	Two-way	A,B,C		10.57	B

Junction Network Options

Driving Side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm Type
A	(untitled)		Major
B	(untitled)		Minor
C	(untitled)		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Width of kerbed central reserve (m)	Has right turn bay	Width For Right Turn (m)	Visibility For Right Turn (m)	Blocks?	Blocking Queue (PCU)
C	6.00		0.00		2.20	150.00	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor Arm Type	Lane Width (m)	Lane Width (Left) (m)	Lane Width (Right) (m)	Width at give-way (m)	Width at 5m (m)	Width at 10m (m)	Width at 15m (m)	Width at 20m (m)	Estimate Flare Length	Flare Length (PCU)	Visibility To Left (m)	Visibility To Right (m)
B	One lane plus flare				10.00	3.50	3.00	3.00	3.00	✓	1.00	31	31

Pedestrian Crossings

Arm	Crossing Type
A	None
B	None
C	None

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Junction	Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
1	B-A	528.044	0.096	0.243	0.153	0.347
1	B-C	772.293	0.118	0.299	-	-
1	C-B	660.830	0.256	0.256	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Flows

Demand Set Data Options

Default Vehicle Mix	Vehicle Mix Varies Over Time	Vehicle Mix Varies Over Turn	Vehicle Mix Varies Over Entry	Vehicle Mix Source	PCU Factor for a HV (PCU)	Default Turning Proportions	Estimate from entry/exit counts	Turning Proportions Vary Over Time	Turning Proportions Vary Over Turn	Turning Proportions Vary Over Entry

(Default Analysis Set) - 2018 Back + Dev, PM

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Minor arm flare	Arm B - Minor Arm Geometry	Is flare very short? Estimated flare length is zero but has been increased to 1 because a zero flare length is not allowed.

Junction Network

Junctions

Name	Junction Type	Major Road Direction	Arm Order	Do Geometric Delay	Junction Delay (s)	Junction LOS
(untitled)	T-Junction	Two-way	A,B,C		10.99	B

Junction Network Options

Driving Side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm Type
A	(untitled)		Major
B	(untitled)		Minor
C	(untitled)		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Width of kerbed central reserve (m)	Has right turn bay	Width For Right Turn (m)	Visibility For Right Turn (m)	Blocks?	Blocking Queue (PCU)
C	6.00		0.00		2.20	150.00	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor Arm Type	Lane Width (m)	Lane Width (Left) (m)	Lane Width (Right) (m)	Width at give-way (m)	Width at 5m (m)	Width at 10m (m)	Width at 15m (m)	Width at 20m (m)	Estimate Flare Length	Flare Length (PCU)	Visibility To Left (m)	Visibility To Right (m)
B	One lane plus flare				10.00	3.50	3.00	3.00	3.00	✓	1.00	31	31

Pedestrian Crossings

Arm	Crossing Type
A	None
B	None
C	None

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Junction	Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
1	B-A	528.044	0.096	0.243	0.153	0.347
1	B-C	772.293	0.118	0.299	-	-
1	C-B	660.830	0.256	0.256	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Flows

Demand Set Data Options

Default Vehicle Mix	Vehicle Mix Varies Over Time	Vehicle Mix Varies Over Turn	Vehicle Mix Varies Over Entry	Vehicle Mix Source	PCU Factor for a HV (PCU)	Default Turning Proportions	Estimate from entry/exit counts	Turning Proportions Vary Over Time	Turning Proportions Vary Over Turn	Turning Proportions Vary Over Entry
		✓	✓	HV Percentages	2.00				✓	✓

Entry Flows

General Flows Data

Arm	Profile Type	Use Turning Counts	Average Demand Flow (PCU/hr)	Flow Scaling Factor (%)
A	ONE HOUR	✓	955.00	100.000
B	ONE HOUR	✓	96.00	100.000
C	ONE HOUR	✓	707.00	100.000

Turning Proportions

Turning Counts or Proportions (PCU/hr) - Junction 1 (for whole period)

		To		
		A	B	C

Name	Description	Composite	Demand Sets	Start Time (HH:mm)	Locked
2018 - PM - Back				17:00	

Network Options

Network Timings

Network Cycle Time (s)	Resolution	Number Of Steps	Time Segment Length (min)	Number Of Time Segments	Modelled Time Period (min)
100	1	100	60	1	60

Signals Options

Equal Length Multiple Cycling	Start Displacement (s)	End Displacement (s)	Phase Minimum Broken Penalty (£)	Phase Maximum Broken Penalty (£)	Intergreen Broken Penalty (£)
✓	2	3	10000.00	10000.00	10000.00

Traffic Options

Traffic Model	DOS Threshold (%)	Flow Scaling Factor (%)	Cruise Scaling Factor (%)	Cruise Times Or Speeds	Use Link Stop Weightings	Use Link Delay Weightings	Exclude Pedestrian Links	Random Delay Mode	Type of Vehicle-in-Service	Type Of Random Parameter	PCU Length (m)
Quick PDM	90	100	100	Cruise Speeds	✓	✓		Complex	Uniform (TRANSYT)	Uniform (TRANSYT)	5.75

Optimisation Options

Auto Redistribute	Optimisation Type	Optimisation Level	Hill Climb Increments	Use Enhanced Optimisation	Optimisation Order	Locked Green Splits	Full Simulation
✓	Hill Climb (Fast)	Offsets And Green Splits	15,40,-1,15,40,1,-1,1		1		

Economics

Unit Of Cost	Monetary Value Of Delay (£ per PCU-hr)	Monetary Value Of Stops (£ per 100 stops)
£	14.20	2.60

Traffic Nodes

Traffic Nodes

Traffic Node	Name	Description
1	(untitled)	

Arms and Traffic Streams

Arms

Arm	Name	Description	Traffic Node
A	(untitled)		1
B	(untitled)		1
C	(untitled)		1
